CONTENTS

LIST OF APPENDICES ........................................................................................................ vi

LIST OF FIGURES ............................................................................................................... viii

LIST OF TABLES .................................................................................................................. xvi

EXECUTIVE SUMMARY ..................................................................................................... ES-1

PROSPECT ANALYSIS ....................................................................................................... S-1

CONCLUSIONS .................................................................................................................... C-1

INTRODUCTION .................................................................................................................. IN-1

Section 1 - Characterizing the Continuous Casters Surveyed
Steel Production of Casters Surveyed ................................................................................ 1-1
Comparing 2003 with 2003 Steel Production .................................................................... 1-2
Number Of Strands .............................................................................................................. 1-7
Ladle Capacity of Casters Surveyed .................................................................................. 1-7
Casting Time Per Heat ........................................................................................................ 1-10
Sequence Casting ................................................................................................................ 1-13
Production Rate of Casters ............................................................................................... 1-17
Continuous Cast Steel Production by Grades Cast (AK, SK, vs. Stainless) ................. 1-20
Continuous Cast Steel Production by Carbon Grades Cast (Medium/High, Low, ULC’s) .................................................................................................................... 1-23
Casting Machine Suppliers ............................................................................................... 1-27
Dimensions of Continuous Cast Product .......................................................................... 1-29
Age of Casters Surveyed ................................................................................................. 1-35
Fundamental Priorities of Continuous Caster Operation Surveyed ......................... 1-36
Casters Surveyed Not Satisfied with Present Level of Automation ......................... 1-37

Section 2 - Characterizing the Existing Oscillator and It’s Performance
Type of Oscillator .............................................................................................................. 2-1
Oscillator Performance .................................................................................................... 2-2
Problems, Concerns, or Issues with Operation of the Existing Oscillator ................. 2-4
Section 3 - Characterizing the Tundish

Tundish Parameters

Tundish Capacity
Tundish Depth

Tundish Practices

Tundish on Hand
Dams and Weirs
The Types of Tundish Flux Used
The Use of a Permanent Tundish Mechanical Cover
The Use of Continuous Temperature Monitoring

Tundish Refractory

The Safety Lining
Working Lining
Heats Per Tundish Working Lining
Changing the Tundish on the Fly

Tundish Preheating and Drying

Type of Preheating or Drying Equipment
Tundish Preheating and Drying Equipment Suppliers
Year Preheating or Drying Equipment Installed
Satisfaction with Performance of Tundish Preheating and Drying Equipment
Planning to Add or Replace This Preheating or Drying Equipment
Is Tundish Insulated?

Tundish Level Control

Measuring Tundish Level
Type of Tundish Level Measurement System

Tundish Flow Control

Type of Tundish Level Measurement System
The Use of Stopper Rods without a Porous Plug
Types of Pouring Tubes Used
SEN (Submerged Entry Nozzle) Suppliers
Metering Nozzle Suppliers
Gas Purging
Nozzle Port Configuration of SEN and SES Nozzles
Casters That Experience an Undesirable Affect From the Current Method of Flow Control
When Diminished Flow Dictates Aborting Flow Through a Strand / Nozzle
Return of Investment Required for Adapting a New Flow Control Technology
What Priority Would be Given to Such an Investment
Section 4 - Characterizing the Mold and Mold Level Control Systems

Mold Shape....................................................................................................................4-1
Is the Caster Mold Adjustable? ................................................................................4-1
Mold Level Measurement System .............................................................................4-2
Eddy Current Mold Level Sensor - Years Used .....................................................4-3
Radioactive Mold Level Sensor - Years Used ........................................................4-4
Satisfaction with Your Current Mold Level Measurement System .......................4-5
Casters Considering or Might Consider Replacing Their Present Mold Level Measurement System...........................................................................................................4-6

The Importance of Technical Support, Service, and Availability of Spare Parts Regarding Mold Level Measurement Systems ..............................................................4-8

More Accurate Measurement of Casting Speed to Improve Mold Level Control ..........................................................................................................................4-8

Section 5 - The Caster Cut System

The #1 Problem with the Caster Cutting Process .........................................................5-1
The Impact on Production of Improving the Caster Cut Process ................................5-2
Outsourcing Total Service of Cut-off Machines, Etc..................................................5-3
Real Time Cut Optimization..........................................................................................5-3

Section 6 - Process Improvement Priorities and Plans For Caster Upgrades

The Process Improvement Priorities for the Caster Operation ....................................6-1
Plans to Address these Priorities and / or to Upgrade the Caster ...............................6-2

Section 7 - Caster Maintenance

Characterizing the Current Maintenance Program.......................................................7-1
Equipment or Systems in Caster Operations Surveyed that Requires the Highest Level of Maintenance ..............................................................7-2
Outsourcing Caster Maintenance Services ..................................................................7-4
Leading Outsourced Services ..................................................................................7-5
Other Outsourced Services ....................................................................................7-6
Suppliers of Outsourced Maintenance Services .......................................................7-7
Strand Conditioning Monitoring Systems ..............................................................7-13
Casters that Do Not Have Strand Conditioning Monitoring .....................................7-13

Section 8 - Segment Rebuilding and Bearings

Outsourcing Segment Rebuilding .............................................................................8-1
Outsourced Segment Repair Work ..........................................................................8-1
Who Decides Which Bearings or Rolls to Use? ......................................................8-2

The Most Critical Segments ....................................................................................8-2
What is the Target Life for These Segments? .........................................................8-4
The Type of Roll Materials Used in These Segments ................................................8-6
What Lasts Longer in the Most Critical Segments - Rolls or Bearings? .................8-6

The Average Life of the Element of the Segment that Lasts Longer
Rolls or Bearings ........................................................................................................8-7
Section 9 - Bearings and Bearing Rework

Bearings .................................................................................................................................9-1
The Types of Bearings Used ...................................................................................................9-1
Are Environmental (Waste Treatment) Issues a Factor in the Selection
of Bearings? .........................................................................................................................9-2
Are Environmental (Waste Treatment) Issues a Trade-Off for Longer
Life? ......................................................................................................................................9-2
Bearing Rework .....................................................................................................................9-3
Are Caster Bearings Reworked? ..........................................................................................9-3
What is the Weak Link in Segment Rebuilding - Bearings or Rolls? .................................9-4
Prospects for a Roll or Bearing Total Solution ....................................................................9-5

Section 10 - The Use of High Temperature Lubricants

The Most Critical Issues Regarding the Use of High Temperature
Lubricants ................................................................................................................................10-1
Consumption of Lubricant(s) Used In High Temperature Applications .............................10-2
Most Important Factors in a Lubricant Product for a Continuous Casting
Operation ..................................................................................................................................10-3
Satisfaction with the Bearing Lubricant Products ................................................................10-4
Leading Lubricant Supplier ....................................................................................................10-5
The Likelihood of Considering a New Lubricant Supplier .....................................................10-6
What Factors Would Prevent You From Buying This Product? ...........................................10-6
Where are Lubricants Purchased? .......................................................................................10-7
Who Specifies High Temperature Lubricant for Continuous Casting? ...............................10-8
LIST OF APPENDICES

The following Appendices provide the information specified for each of the plants surveyed:

Appendix 1: List of Firms Contacted
Appendix 2: Individuals Contacted
Appendix 3: Prospect Analysis
Appendix 4: Characterizing the Caster Operation
Appendix 5: Characterizing the Caster Operation (Cont.)
Appendix 6: Fundamental Priorities and Automation
Appendix 7: Characterize Existing Oscillator and It's Performance
Appendix 8: Characterize the Tundish
Appendix 9: Characterize the Tundish Refractory
Appendix 10: Preheating and Drying Equipment, Emissions Concerns and Insulation
Appendix 11: Tundish Level Control
Appendix 12: Tundish Flow Control
Appendix 13: Tundish Flow Concerns and Benefits of Improvement
Appendix 14: Tundish Diminished Flow and ROI For Better Flow
Appendix 15: Tundish Flow - New Technology
Appendix 16: Characterizing the Mold and Mold Level Measurement
Appendix 17: Ways to Improve Mold Level Measurement
Appendix 18: Mold Level Measurement Support and Measuring Casting Speed
Appendix 19: Caster Cut
LIST OF APPENDICES (Cont.)

Appendix 20: Caster Cut - Outsourcing Services and Real Time Optimization Services
Appendix 21: Process Improvement Priorities and Plans for Caster Upgrades
Appendix 22: Capital Expenditures
Appendix 23: Caster Maintenance Program
Appendix 24: Caster Maintenance Services Outsourced
Appendix 25: Strand Condition Monitoring
Appendix 26: Segment Rebuilding and Bearings
Appendix 27: Caster Maintenance
Appendix 28: Caster Maintenance (Cont.)
Appendix 29: Caster Bearing Rework
Appendix 30: Segment Rebuilding
Appendix 31: Continuous Caster Bearing Lubricant Maintenance Key Qualifier
Appendix 32: Most Critical Issues Regarding the Use of These Lubricants
Appendix 33: Lubricant Consumption and Most Important Factors in Lubricants for Casting Operation
Appendix 34: Satisfaction With the Bearing Lubricant Product(s) Used and Overall Satisfaction
Appendix 35: Likelihood and Obstacles to Consider Suppliers
Appendix 36: Where Do You Purchase These Lubricants?
Appendix 37: Specifying Lubricant Influences
Appendix 38: Lubricant General Comments
Appendix 39: Casting Machines Not Included In Survey Located in Plants Surveyed
Appendix 40: Continuous Caster Questionnaire
LIST OF FIGURES

INTRODUCTION

Figure 1 - Functional Responsibilities of Persons Interviewed ........................................ IN-3

Section 1 - Characterizing the Continuous Casters Surveyed

Figure 2 - Projected 2003 Steel Production by Type of Caster ..............................1-1
Figure 3 - Projected Steel Production of Casters Surveyed, % Increase over 2002, and Amount of Increase .................................1-2
Figure 4 - Projected 2003 Steel Production of Billet Casters Surveyed & Increase over 2002 ..................................................1-3
Figure 5 - Projected 2003 Steel Production of Bloom Casters Surveyed & Increase over 2002 .........................................................1-4
Figure 6 - Projected 2003 Steel Production of Slab Casters Surveyed & Increase over 2002 ..........................................................1-5
Figure 7 - Projected 2003 Steel Production of Thin Slab Casters Surveyed & Increase over 2002 ......................................................1-6
Figure 8 - Ladle Capacity - Billet Casters Surveyed .................................................1-7
